| Total Questions | $: 100$ |
| Description | $:$ |

1. Each question will carry 1 (One) Mark for correct answer.
2. There will be a negative marking of 0.25 (one-fourth) marks for wrong answer
3. Do not use the alt-tab, mouse or any other device to shift from examination screen to any other screen or do not try to open any other application while attempting the examination. Doing so may result in discontinuation of examination and your examination will be considered as null and void.Attempting to close the browser repeatedly will lock the exam.

## How to use the system:

1. How to start the test: You can start the test by clicking the Declaration Check box and then 'I am ready to begin button ' .
2. How to change the question: For the move to the next question you have to click on the 'Save And Next' button the same as for move to the back, click on the 'Previous' button.
3. How to answer a question: You can select any answer by clicking on the button displayed just before the answers. You have to finally click the button - Save and Next - to save your answer and move to the next question. In Exam Sections, the Red Circle corresponding to this question turns Green. You can go to any section / any question number by clicking the relevant control.
4. How to skip the question: You can click the " Next Question" control to move on the next question
5. How to mark a question for review: If you want to review any question later, you have to click the "Review" checkbox. This answer will be marked for review.
6. How to Submit your test: By clicking On last question and Submit Test button one popup window display asking for "Are you sure, you want to Submit your test ?" You have to click on "YES" to submit your test.

- Circle symbols displayed at the bottom of the screen:
-Red Color: Current Question.
-Green Color: Attempted Question.
-White Color: Unattempted Question.
-Blue Color: Attempted and Reviewed Question.
-Violet Color: Unattempted and Reviewed Question

Consider the following statements with reference to protective relays:

1. The minimum relay coil current at which the relay operates is called pick-up current.
2. The pick-up value of a relay is 7.5 A and the fault current is 30A. Therefore, its plug setting multiplier is 5 .
3. An earth fault current is generally lesser than the short-circuit current.
4. Induction relays are used with both a.c. and d.c. quantities.
